

## **JOBS, JOBS, AND MORE JOBS**

That's the whole idea, isn't it? Finding a good job. Good jobs are out there, and we can help you find one that's right for you. First, you need to decide which career path to choose, and then you need to get proper training. That's when the job search begins.

There are a number of ways Bay State School of Technology will help you to find that perfect job. First our Student Services office will work with you to produce a professional, effective résumé. In addition, we'll give you interview preparation tips, along with some "do's and don'ts" when you go for that big interview.

Bay State maintains an internal job bank exclusively for Bay State students and graduates. Employers call up each and every day to list jobs for their company. These are jobs that never make the newspaper. Our Student Services office will automatically e-mail or fax your resume to prospective employers in your area if you're in the hunt for a new job.

We also maintain an online Jobs Board, where students can post their resumes for employers to review, and employers can post jobs for students to apply for. The jobs Board usually gets new jobs every week.

What kind of jobs are these? Good jobs as Major Appliance Repair Techs, HVACR Techs, and Electronics Techs. You can go online to the recently published U. S. Department of Labor's Occupational Outlook Handbook<sup>1</sup>, to see for yourself the job descriptions, income estimates, and rate of job growth and more for each of these careers. As an example, job opportunities for HVAC Tech are expected to increase by 21% over the next seven to eight years, much faster than average.<sup>2</sup> With this in mind; doesn't it make sense to set yourself on a career path that actually has lots of jobs available in the future?

If you choose Bay State as your training provider, you can choose from a

<sup>2</sup> <http://www.bls.gov/ooh/installation-maintenance-and-repair/heating-air-conditioning-and-refrigeration-mechanics-and-installers.htm>

variety of solid career choice options. In our Major Appliance/Basic Electricity course, you'll learn about electricity as it's applied to major appliances using a course-supplied multi-meter and the latest multi-media teaching/learning equipment. You'll learn how to read a wiring diagram/schematic and use it to diagnose electrical problems. You will work with real washers, gas and electric dryers, dishwashers, microwave ovens, compactors, disposals and gas and electric ranges to diagnose and repair problems.

Bay State's Domestic Refrigeration/Air Conditioning course covers the basics of refrigeration theory in terms of home refrigerators and air conditioners, freezers and de-humidifiers. You will learn about all the major components in refrigeration products and how to diagnose problems using schematic diagrams and course-supplied compound gauges. In addition we will prepare you for EPA 608 (commonly known as Freon Recovery) and PSA on-site testing and certification.

Commercial HVACR will immerse you in the basics of larger refrigeration and cooling units, ductless split systems, electronic controls, ice machines, heat pump systems, and more. You will expand and sharpen your skills from Domestic Refrigeration using diagrams, gauges, recovery equipment and brazing skills. This program also provides you with 100 hours of Massachusetts Refrigeration Code and 150 hours of Massachusetts Electrical Codes, both of which are required to qualify for a commercial Refrigeration Technician along with other requirements.

In our Electronics Technician program, you'll be able to work with circuits, transistors, and computer and networking components as well as other Electronic devices in order to prepare you for a wide variety of jobs related to Electronics. You'll also be prepped to take the Industry Standard IS CET Certification test to be industry certified.

Your Bay State Tech training will teach you how to go from having a job to having a career. We can teach you to have a productive and rewarding career as a technician in the Electronics, Major Appliance, or HVACR field.

And, again, the best part is that there is *NO PRIOR EXPERIENCE REQUIRED!*

Day and evening classes start are forming for March, so now is the time to do the research and prep work to set your new career path. Call our Admissions Office at 888-828-3434 today to arrange a visit to our campus. During your visit, you'll be able to:

- Meet with an Admissions Representative and tour the school
- Learn about the available career paths and courses
- Sit in on a live class when classes are in session
- Speak with actual students
- Visit Student Services to see how we help our students start their new careers
- Stop by Financial Aid to see if Federal Student Aid is right for you
- Get all your questions answered.

Call Bay State at 888-828-3434 to take that first step. Ask for a brochure, and schedule a time to come and take a look at your new career. Bring a family member or friend with you to see the school. They're always welcome.

Bay State School of Technology is licensed by the Commonwealth of Massachusetts, and accredited by the Accrediting Commission of Career Schools and Colleges, and is approved for Veteran's Training by the Veteran's Administration.
